DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Andrew T. Hyman on January 8, 2007.

2. The application has been amended as follows:

Claim 5 (Currently Amended) A method comprising:
estimating a delay of a signal received at a mobile station from a specific network element of a network within a search window; and

determining said search window based on location information available for said specific network element and based on a known distance of said mobile station to at least one other network element,

wherein said at least one other network element comprises at least two network elements, to which a respective distance was already determined based on delay measurements on signals from said at least two network elements, ~~and~~

wherein said search window is selected such that it covers intersection points of all circles around said at least two network elements with a radius of the respectively determined distance, and
wherein said search window is used to determine the location of said mobile station.

Reasons for Allowance

3. **Claims 5-12, and 19** (*renumbered as 1-9, respectively*) are allowed.

4. The following is an examiner's statement of reasons for allowance:

Claim 5 is allowed because the closest prior art, KUWAHARA (EP 1,164,383 A2), either singularly or in combination, fails to anticipate or render obvious the features of wherein a search window is selected such that it covers intersection points of all circles around said at least two network elements with a radius of the respectively determined distance.

Claims 12 and 19 are allowed because the closest prior art, KUWAHARA (EP 1,164,383 A2) in view of CHEN et al. (US 6,748,224), either singularly or in combination, fail to anticipate or render obvious the features of wherein a search window is subdivided into at least two-sub-windows, each covering a respective intersection point.

Claims 6-11 are allowed as being dependent upon independent claims that have been allowed.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Prior Art of Record

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

(a) BEN-ELI (US 2003/0134652 A1) - Method and apparatus for searching for a base station using an adaptable search window.

Art Unit: 2617

(b) MERSON et al. (US 2003/0176189 A1) – Wireless Communications handoff method and system employing such.

(c) TANG et al. (US 7,065,369 B2) – Method of location and measuring a mobile station.

(d) KUWAHARA et al. (US 2001/0051527 A1)- Wireless position measurement terminal and wireless position measurement system.
